

Bering Sea and Aleutian Islands Rougheye Rockfish Catch Report

Through: 09-Jun-2018

National Marine Fisheries Service
Alaska Region, Sustainable Fisheries
Catch Accounting

Area	Total Catch	Last Week's Catch
Bering Sea/Eastern Aleutian Islands	8	0
Central Aleutian Islands	1	
Western Aleutian Islands	5	
Totals:	14	0

At the December 2017 Council meeting, the Science and Statistical Committee (SSC) addressed concerns about fishing pressure relative to biomass in the Western Aleutian Islands. The SSC recommended estimation of a maximum sub-area species catch (MSSC) amount to guide the public regarding the level of catch needed to alleviate the "concern". For 2018, the MSSC amount is 35 mt and 204 mt for the Western and Central Aleutian Islands, respectively. Information on the calculation of these amounts may be found in the most recent Blackspotted and Rougheye Rockfish stock assessment at <http://www.afsc.noaa.gov/REFM/Docs/2017/BSAIfrougheye.pdf>
